OBJECTIVE

Final-year Software engineering student specializing in Backend and Full-stack web Development. Experienced in building real-time applications, robust management systems, and scalable APIs using Java, C# and MERN stack.

Strong focus on relational database design, object-oriented programming, and system optimization. Seeking a Software Engineer Intern role to apply problem-solving skills, solid algorithmic foundation, and contribute to real-world production applications systems.

EDUCATION

Nguyen Tat Thanh University

Bachelor of Science in Software Engineering

2022 – 2026 (Expected)

- Current GPA: 3.18 / 4.0
- Relevant Coursework: Data Structures and Algorithms, Object-Oriented Programming, Database Systems, Software Engineering

TECHNICAL SKILLS

Backend:	Java (Spring Boot), Node.js (Express), C#, PHP (Laravel).
Frontend:	ReactJS, TypeScript, JavaScript.
Database:	PostgreSQL, MongoDB, SQL Server, MySQL, Redis
Architecture & Core:	Microservices, Distributed Systems, RESTful APIs, OOP, MVC, Data Pipelines.
Infrastructure & Tools:	Docker, Nginx, Git, Postman
AI Integration:	LLM Integration (Ollama), Scikit-learn, Gemini.

PROJECT EXPERIENCE

CRM Chat Services

Tech: MongoDB, Express.js, React, Node.js | 2025 | [GitHub](#)

- Built a real-time messaging web application from the ground up to support concurrent user interactions.
- Redesigned MongoDB schemas, cutting profile query time by 40% and supporting rapid retrieval of 1M+ chat messages.
- Enhanced overall system latency and throughput by implementing batch upload streaming and distributed processing pipelines.

Learning-VN Platform

Tech: Spring Boot, React, PostgreSQL, Docker, JWT, Ollama | 2026 | [GitHub](#)

- Engineered a scalable Full-stack Learning Management System supporting seamless course enrollment, lesson tracking, and interactive quizzes.
- Designed a secure RESTful API layer utilizing Spring Security and JWT-based authentication, Implementing OTP email verification and robust password hashing.
- Integrated a local Ollama AI engine to automate personalized learning roadmaps and conduct code reviews based on a custom token-usage system.
- Developed an AI Tutor feature using a local Ollama AI engine to generate personalized learning roadmaps and provide automated code review with a token-based usage system.
- Implemented automated ZaloPay payment gateways to manage complete lifecycles for premium user subscriptions.
- Containerized the entire application ecosystem, orchestrating PostgreSQL, backend services, and the AI engine using Docker and Docker Compose.

High-Concurrency Ticket Booking System

Tech: Node.js, Express, React, PostgreSQL, Redis, Ollama, Socket.IO | 2026 | [GitHub](#)

- Architected a full-stack ticket booking platform capable of handling thousands of concurrent reservations with zero race conditions.
- Implemented Redis-based seat locking with an automatic 5-minute release, eliminating double-bookings and reducing abandoned carts by 15%.
- Integrated Socket.IO for near-instant WebSockets broadcasting of real-time seat availability, eliminating polling delays for client UI synchronization.
- Optimized PostgreSQL database throughput via connection pooling, transaction batching Promise.all, and index tuning on time-sensitive expiry queries.

- Developed an AI-powered booking assistant to provide automated, personalized seat selection suggestions.

CERTIFICATIONS

TOEIC Certificate – 600/990 (Issued in 2025 by IIG Vietnam) 2025

ADDITIONAL INFORMATION

Language: Vietnamese (Native), English (Technical)
